Ecolab certifies Interroll Drum Motors compatible with disinfecting products

Sant'Antonino/Hannover, 4th May 2011. Based on real environment tests, the global leader in cleaning and disinfecting Ecolab has certified Interroll Drum Motors as compatible with cleaning and disinfecting products under given conditions.

Cleaning specialist Ecolab has certified a 5-year minimum lifetime of materials used for the Interroll Drum Motors of the S-series, i-series, e-series and d-series (new synchronous version) when exposed to typical cleaning and disinfecting procedures using Ecolab's Topax range of products: P3-topax 19, P3-topax 686, P3-topax 56 and P3-topactive DES. Testing includes complete soaking of techno polymer and sealing materials over a 28-day period to simulate the accumulated daily cleaning cycles for a 5-year period. Metals are soaked over 7 days.

"We are very pleased with the Ecolab certification", says Peter Uttrup, Global Food Industry Manager of Interroll. "It is a seal of approval from an independent expert. It confirms our own expertise we have gained over decades. In addition, it assures the food processing industry around the world that our Drum Motors for hygienic conditions are a proven and sustainable drive solution to their various belt conveyor needs."

Among the certified Drum Motors is Interroll's new Synchronous Drum Motor whose versions with cylindrical and hexagonal shell are soon expected to receive the Type EL - Class I certification from the European Hygienic Engineering & Design Group (EHEDG).

For food processing and other applications where hygiene is paramount, Interroll recommends easy to clean rust free premium materials, such as: stainless steel for shells, shafts and end housings, techno polymers and hot vulcanised FDA and (EC) 1935/2004 approved white NBR and PU rubber lagging for modular belt applications.

With sales of \$6 billion and more than 26,000 associates, Ecolab Inc. (NYSE: ECL) is the global leader in cleaning, sanitizing, food safety and infection prevention products and services. Ecolab delivers comprehensive programs and services to foodservice, food and beverage processing, healthcare, and hospitality markets in more than 160 countries. More news and information is available at www.ecolab.com.

Interroll is one of the world's leading manufacturers of key products for unit load handling systems, internal logistics and automation. These solutions are used primarily within the area of food processing, airport logistics, postal services, distribution and in various segments of industry. The products include easy-to-
